the book presents aspects of cross currents of theorizing of self culture and society in the

contemporary taiwan social theorizing has been addressed critically reflectively and creatively by the philosophical religious psychological and literary traditions of one of the world's great civilizations theorizing is a dynamic movement of self culture society and the world as it is related to our actions reflections meditations to understand the world more meaningfully and holistically as well as to transform it but much of social theorizing in the modern world is primarily euro american and despite the so called globalization of knowledge this condition of one sided euro american valorization of knowledge and neglect of others continues unabated there is very little attention to theorizing about the human condition emerging from other parts of the world such as taiwan and its global implication this book transforms this condition by mapping the field of theorizing in a wider spectrum of philosophy psychology religions social sciences and humanities in contemporary taiwan

one breath is a gripping and powerful exploration of the strange and fascinating sport of

freediving and of the tragic untimely death of america's greatest freediver competitive freediving a sport built on diving as deep as possible on a single breath tests the limits of human ability in the most hostile environment on earth the unique and eclectic breed of individuals who freedive at the highest level regularly dive hundreds of feet below the ocean's surface reaching such depths that their organs compress light disappears and one mistake could kill them even among freedivers few have ever gone as deep as nicholas mevoli a handsome young american with an unmatched talent for the sport nick was among freediving's brightest stars he was also an extraordinary individual one who rebelled against the vapid and commoditized society around him by relentlessly questing for something more meaningful and authentic whatever the risks so when nick mevoli arrived at vertical blue in 2013 the world's premier freediving competition he was widely expected to challenge records and continue his meteoric rise to stardom instead before the end of that fateful competition nick mevoli had died a victim of the sport that had made him a star and the very future of free diving was called into question with unparalleled access and masterfully crafted prose one breath tells his unforgettable story and of the sport which shaped and ultimately destroyed him

freediving equipment consists of decades long knowledge great scientific discoveries and 21st century state of the art technology concentrated in a gear bag freediving equipment comprises just a few items which the freediver must wear with each item intended to augment his physical abilities to a much higher level understanding the characteristics and operation of each part of the freediving equipment is crucial for freedivers and their progress in freediving technique largely depends on it a second vital rule in the selection of freediving equipment is that it must individually fit the needs of the particular diver and its selection must be based on every diver's personal needs even today this remains the greatest difficulty when selecting equipment it still is a piece of clothing which must individually fit its owner's body while at the same time offering all functional elements required by the diver so in our discussion on equipment we rely on two principles first there is no ideal freediving equipment for all divers in general but there is ideal equipment for each diver and each desired type of freediving second even the best personal equipment in terms of design and quality will be rated as to its functionality by what we eventually do in the water this book aspires to aid in this effort i.e. teaching freedivers how to select and evaluate the equipment before purchasing it and then rating it and classifying it in the water even today the appropriate knowledge is still the most precious gift when choosing freediving equipment because even in our time of abundance the selection of suitable equipment for an activity as specialized as freediving remains a science in itself the book follows a specific method to solve the equipment problem for every diver at any level of experience 1 it describes the materials and the designing principals for each item of the equipment 2 it describes the requirements in functioning underwater 3 it names the rules of the game in selecting every item of the freediving equipment by writing down the different requirements of every level of training from each item and the possible personal requirements a specific diver could add to fit his personal needs selecting the freediving equipment should be an interesting and enjoyable experience both at the stores and in the water and this is the goal of this guide to help all levels of freedivers discover new ways to choose test and grade their equipment and make their personal high performance and complete freediving gear

a complete manual for the 1st level of free diving an excerpt from the foreword of the book the idea for the book gave birth to many treasures but the moment had matured for all this practical experience having by now personally taught hundreds of freedivers how to freedive to 10 20 and 30 meters to finally turn into a written guide on the technique of freediving if i felt as if i was missing something twenty years ago by now i possessed it in abundance it was the actual experience in the water with newcomers people who did not even know what a wetsuit was and in the span of one week to enable them to comfortably dive to 10 meters while even commenting afterwards on how easy freediving was yet freediving is of course far from easy the satisfaction however of hearing them say it is huge when you have designed the training program and when you had been the trainer who managed to transform a person that until the previous day had not even once equalised pressure in his life into an excellent freediver as priceless is also the moment familiar to every instructor when your student succeeds on conquering a particular depth for the first time and surfaces with a genuine smile of deep joy and satisfaction on his accomplishment this is ultimately the goal of this book to accompany the new freediver into the sea and to help him step by step in building an excellent technique and achieving new goals in freediving all the while giving him a smile of success a book cannot of course replace training or an entire dive learning program today however our era might offer great training programs and excellent trainers but no remarkable books comprehensive technique guides and i trust as a writer that this void will be filled today with the publication of a unique book for the new freediver yannis detorakis freediver instructor trainer padi designer of freediver advanced and master freediver padi courses distinctive specialties 2004 2015
